ZOMM 127/408/1/4

PD Devices Ltd manufacture a wide range of products to protect against the effects of high altitude detonation of Nuclear devices. The result of such an event is the generation of Electromagnetic Pulses which will induce a high voltage transient in exposed conductors.

The EMP can affect several thousands of square kilometres, with a magnitude of tens of kilovolts.

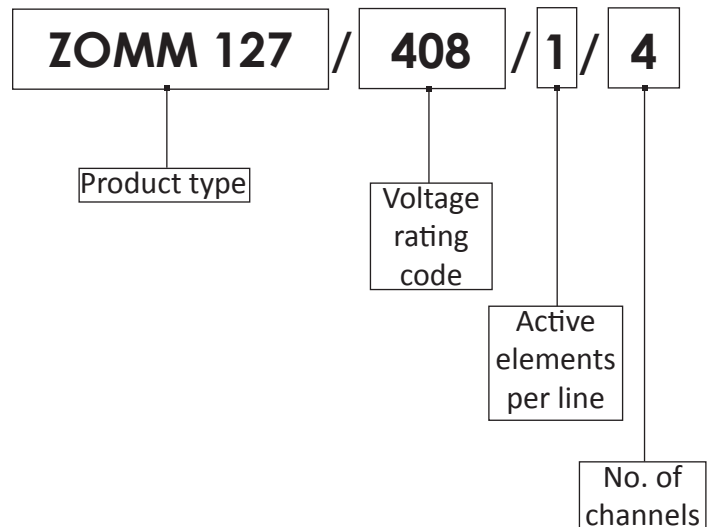

This could result in serious damage to insulation, cause breakdown of semiconductors and the consequent malfunction of critical equipment.

Most notable would be the failure of Energy Power Supply and Communications Systems. We offer products to satisfy protection for most applications

Specification	
No. of channels	4
50 Shot (4/20µs) Repetitive Duty	1000A
Response Time	<10ns
Continuous Current per Channel	10A
Max. (8/20µs) Current per Channel	6500A
Leakage Current per Channel at Rated Voltage, DC	<100µA
Through Inductance	<10µH
Volts Drop	Negligible
Terminations	3mm Dia Brass
Bushes	PTFE
Earth Connection	To Base Plate
Recommended Torque per M4 Terminal	1.0Nm (Ensure terminal does not rotate)
